<b>Preface</b>	<b>4</b>
Welcome	
<b>Layout and Identity</b>	<b>8</b>
Parents and children	
Fixing view sizes	
Layout neutrality	
Multiple frames	
Inside TupleView	
Understanding identity	
Intentionally discarding identity	
Optional views, gestures, and more	
<b>Animations and Transitions</b>	<b>60</b>
Animating the unanimatable	
Avoiding pain in iOS 15.6 and below	
Creating animated views	
Custom timing curves	
Overriding animations	
Advanced transitions	
<b>Environment and Preferences</b>	<b>106</b>
The environment	
@Environment vs @EnvironmentObject	
Overriding the environment	
Preferences	
Anchor preferences	

<b>Custom Layouts</b>	<b>150</b>
Adaptive layouts	
Implementing a radial layout	
Implementing an equal width layout	
Implementing a masonry layout	
Layout caching	
<b>Drawing and Effects</b>	<b>187</b>
Drawing with Canvas	
Falling snow	
Creating a lava lamp	
Blurred backgrounds	
Magic with SpriteKit	
<b>Performance</b>	<b>236</b>
Delaying work...	
...or skipping it entirely	
Watching for changes	
The SwiftUI cycle of events
